Basic Gas Chromatography-Mass Spectrometry: Principles and ...

Gas chromatography-mass spectrometry (GC-MS) combines the features of gas-liquid chromatography (GC) and mass spectrometry (MS). This makes it possible to identify different substances within a test sample. GC-MS has many uses include drug detection, fire investigation, environmental analysis and explosives investigation. It can also be used to identify unknown samples.

Basic Gas Chromatography-Mass Spectrometry - 1st Edition

The technology had its start 60 years ago in Midland, Michigan, with the pairing of two powerful analytical techniques — gas chromatography (GC) and mass spectrometry (MS). By coupling the ability of GC to separate a chemical mixture with the ability of MS to identify its components, the new, combined technique proved revolutionary.

Gas chromatography-mass spectrometry - Wikipedia

The Gas Chromatography/Mass Spectrometry (GC/MS) instrument separates chemical mixtures (the GC component) and identifies the components at a molecular level (the MS component). It is one of the most accurate tools for analyzing environmental samples.

Gas Chromatography/Mass Spectrometry (GC/MS)

Gas Chromatography Mass Spectrometry (GC/MS) is a common scientific analytical method for determining individual substances within a sample. Within the context of drug testing, GS/MS is utilized to verify what substances are found within an employee's sample (blood or urine).

What is Gas Chromatography Mass Spectrometry (GC-MS ...

How Gas Chromatography Works First, a liquid sample is prepared. The sample is mixed with a solvent and is injected into the gas chromatograph. Typically the sample size is small -- in the microliters range.

Mass spectrometry (MS) is an analytical technique that measures the mass-to-charge ratio of ions. The results are typically presented as a mass spectrum, a plot of intensity as a function of the mass-to-charge ratio. Mass spectrometry is used in many different fields and is applied to pure samples as well as complex mixtures.

Mass spectrometry - Wikipedia

Gas Chromatography Gas chromatography is used to separate mixtures of compounds that are volatile or can be made volatile. GC may be gas-solid chromatography, with a solid stationary phase, or gas-liquid chromatography (GLC), with a nonvolatile liquid stationary phase. GLC is commonly used in clinical laboratories.
